Module 5 Project: Generics and Enums (Part 2)

Instructions

Continue Lab 5, beginning with the section titled 'Implementing the view'. Complete all coding through the section titled 'Initializing the application'. Be sure your code compiles cleanly. Run the application, add some sample books, and get a screen snip of the window showing your data.

There is no Canvas submission for this project, you will submit your work to a GitHub repository as described below.

Submitting your work

Once your project is complete, commit your files (source code and screen snip of the window showing your data) to the provided classroom repository. Your instructor will clone and grade your repo after the due date for this assignment.

There is no Canvas submission for this project, you will commit the PowerPoint presentation with screen snips to the provided classroom repository.
